

Old Class Diagram:

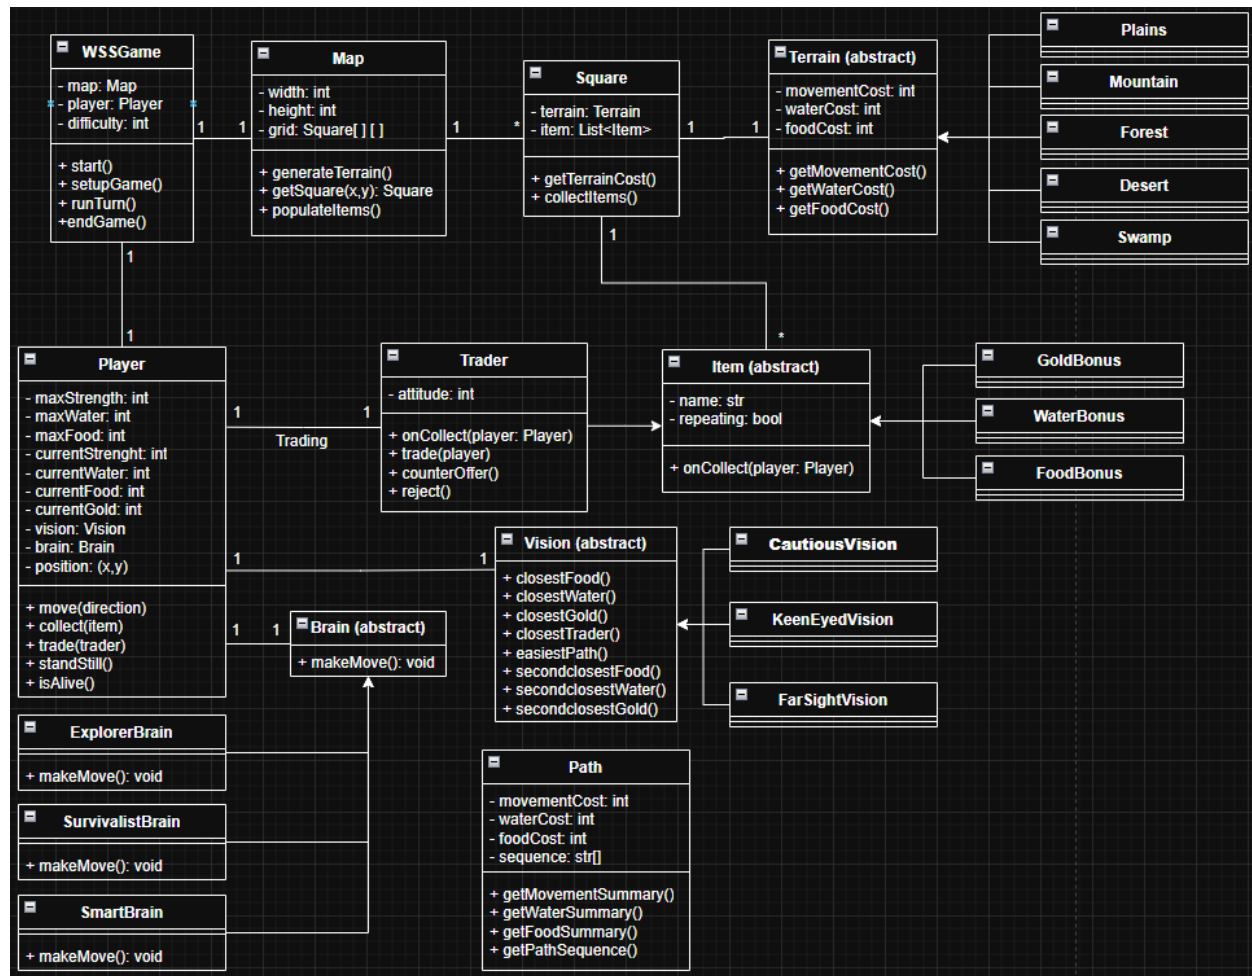

Things that needed to be changed:

- **Replace** relationships between trader and player with one relationship labeled trading
 - **Reasoning:** Traders could have a relationship with players 1-1 when trading and should be labeled as such.
 - **Reasoning:** Traders shouldn't be players. Based on WSS specification there is only one player per game.
- **Change:** Arrows between terrain and its types(plains, mountain, etc) should be swapped. Multiplicities can also be removed.
 - **Reasoning:** subclasses should point to their super class
- **Change:** Arrows between trader and item should be swapped
 - **Reasoning:** subclasses should point to their super class
- **Change:** Arrows between item and its types(goldbonus, waterbonus, etc) should be swapped. Multiplicities can also be removed.
 - **Reasoning:** subclasses should point to their super class
- **Change:** The relationship between square and item should be changed into a line instead of an arrow.
 - **Reasoning:** We are not inheriting anything between square and item
- **Change:** The relationship between brain and player should be a line instead of arrow
 - **Reasoning:** Brain is not inheriting anything from player

- **Change:** The relationship between vision and player should be a line instead of arrow
 - **Reasoning:** Vision is not inheriting anything from player
- **Add:** a class called path that contains a sequence of moves, and cost values for food, movement, and water
 - **Reasoning:** This is a requirement from HW3 on page 3 under vision section
- **Add:** second closest moves(food, water, etc.)
 - **Reasoning:** This is a requirement for HW3 on page 4 under vision section
- **Change:** CautiousVision into multiple subclasses of vision
 - **Reasoning:** This is a requirement for HW3 on page 4 under vision section
- **Change:** ExplorerBrain into multiple subclasses of brain
 - **Reasoning:** This is a requirement for HW3 on page 4 under vision section

New Class Diagram

Further changes that can be made:

- Fleshing out Vision: This depends on how we want to implement vision
- Adding more detail on data types that methods are returning.
